

Software for Managing Grain Storage and Grain Drying

You need software that is simple and quick to use – which allows you to get on with your real work, especially at harvest time.

Square1 has been designed by farmers in collaboration with agricultural merchants, Armstrong Richardson (www.armstrongrichardson.co.uk) and IT specialists Gordon Associates. The system supports the management of grain stores and grain dryers and allows you to:

- Track wet grain led in and calculate dry weights
- Manage sales and transfers of grain in store
- Track all loads out
- Keep track of what is/was in the store at any point in time
- Process charges for storage and drying of all grain types
- Record one-off public weighs of vehicles & associated charges

Each transaction is managed by a straightforward ticket numbering system and provides full traceability of all items.

The sophisticated yet simple-to-use reporting functions of Square1 allow you to see all movements by customer, print a breakdown of charges for each customer and much more.

Prices are based on a monthly license fee per user which includes support and telephone guidance whenever required. There is a one off installation & training fee. Square1 can also be customised to your way of working and can be easily extended if you require, for example linking to weighbridges.

Don't Take Our Word For It ...

"We were looking for some software to help us with tracking all our grain store movements and charges, but any other systems were either too expensive or too complicated to use.

We went for Square1 and we love it. It's nice and simple - and does everything we need."

Steve Dawson, Dawson Farms, Swainby, North Yorkshire

Web Sites & Online Sales

Are you thinking of using new ways to drive your business and sales? Gordon Associates build websites, databases and online systems to run your business and enable you to collaborate with suppliers and other partners via the internet, see www.gordonassociates.co.uk.
